Singapore 575625

Dear Ms Tan,

I attended 2 training courses titled "**Apply Engineering Simulation Fundamentals**" and "**Perform Structural Simulation for Design Verification**". The trainings were very beneficial to new users of ANSYS as well as a good introduction on the topic of engineering simulation. I had benefited from the training tremendously and I had the training department of CAD-IT Consultant to thank for. The department's staff had gracefully aid me through the more difficult topics and guided me through some of the more tricky situations I encountered during the training.

The trainer's depth of knowledge and skill in presenting the material played a major role in ensuring I maximize the value spent on enrolling in this course. Not to be forgotten are the sales and marketing department as well as the involved staff members who helped make this training a successful and comfortable event.

At last, I would like to thank those who involved in arranging the training course, registration and ensuring the training become comfortable and the Sales/Marketing department that had given this training opportunity as a token of gratitude for our continuing support for the usage of ANSYS Workbench software.

We hope to participate in other similar courses and to continue our good working relationship with CAD-IT Consultants.

Yours Sincerely,

A handwritten signature in blue ink, appearing to read "Fan", written over a horizontal line.
