Dear Terence,

LETTER OF COMMENDATION

Greetings! Due to 2 important objectives that our company had to achieve – 1st, to increase product quality and 2nd, to reduce production costs, we embarked on using Gas Injection Molding process. In line with this investment, we made a decision to purchase from your company the world renowned Moldflow Plastic Analysis software in order to simulate the GIM process.

However, the effectiveness of all software depends very much on the user's level of competence in applying it, more so in the usage of CAE software. Although there are many companies in China who have invested in Moldflow, many are not able to fully exploit the benefits of the software due to the poor level of technical support offered by the previous distributor. This had also resulted in a lack of proper understanding in the power of this technology. Fortunately, ever since CAD-IT had taken over the distributorship in China late last year, you had organised a number of Moldflow training seminars. By attending your seminars, our understanding of Moldflow had increased tremendously. This will greatly help our company to further utilise this technology to achieve greater productivity.

The duration of the recently held Moldflow training was ten days, from 9th Feb till 18th Feb. The first 6 days of MF/Flow & MF/Cool. training was conducted by your Moldflow consultant Mr Jin Song and the last 3 days of MF/Gas was conducted by consultant Mr Ladis. Both of them are dedicated in their tasks, patient and careful in explaining the concepts. Also, your Mr.Guan Wen Hao made a wonderful translator for Mr.Ladis. We are deeply grateful to your company for a very effective training program. We had achieved a good grounding in the basics of the software & look forward to mastering it even further in the days ahead.

We trust that CAD-IT will continue to provide us with your excellent support and assistance in our future projects so that we can excel in our business through the use of leading edge technology. We look forward to cooperating closely with your company.

Your faithfully
